

SurveyCube

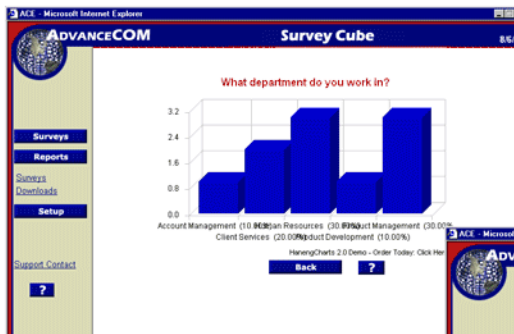

Do you know your Customer?
 Are they satisfied with your products and services?
 Why are they loyal to your brand?
 Will they respond to you via email or your website?

Online inquiries and web based marketing surveys are the most cost effective 1-2-1 and 1-2-many methods of reaching customers and site traffic visitors, as well as gathering market research to understand and more accurately predict marketplace behavior.

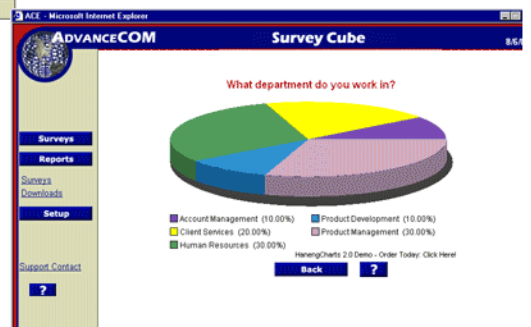

SurveyCube is a Web-Based, Survey Management System that allows the enterprise to Ask, Capture and Evaluate psychological outcomes, market survey research, customer and employee feedback, through a single, database driven, online application tool.

Since SurveyCube is an enterprise application tool, it can be configured for a variety of online uses simultaneously across several departments/divisions targeting selected users, collecting, assessing and analyzing critical on-line information about your customers, affiliates, prospects and employees based upon several selected profiling criteria.

Key features of this unique web based tool include: Create/Edit Copy Surveys, Generate personalized Look and Feel on the web, Skip/Go To Rules, Structured Feedback Rules, Security, Data Validation, Data Encoding, Enhanced User Interface, Read Only Surveys and Evaluation capabilities.

SurveyCube is designed to allow respondents to make changes to answers at will, or, "lock" down a respondent's answer so it can't be changed.
